

CAKE BOXES AND CUPCAKE BOXES

Cupcake and cake boxes

made of FSC®-certified kraft cardboard

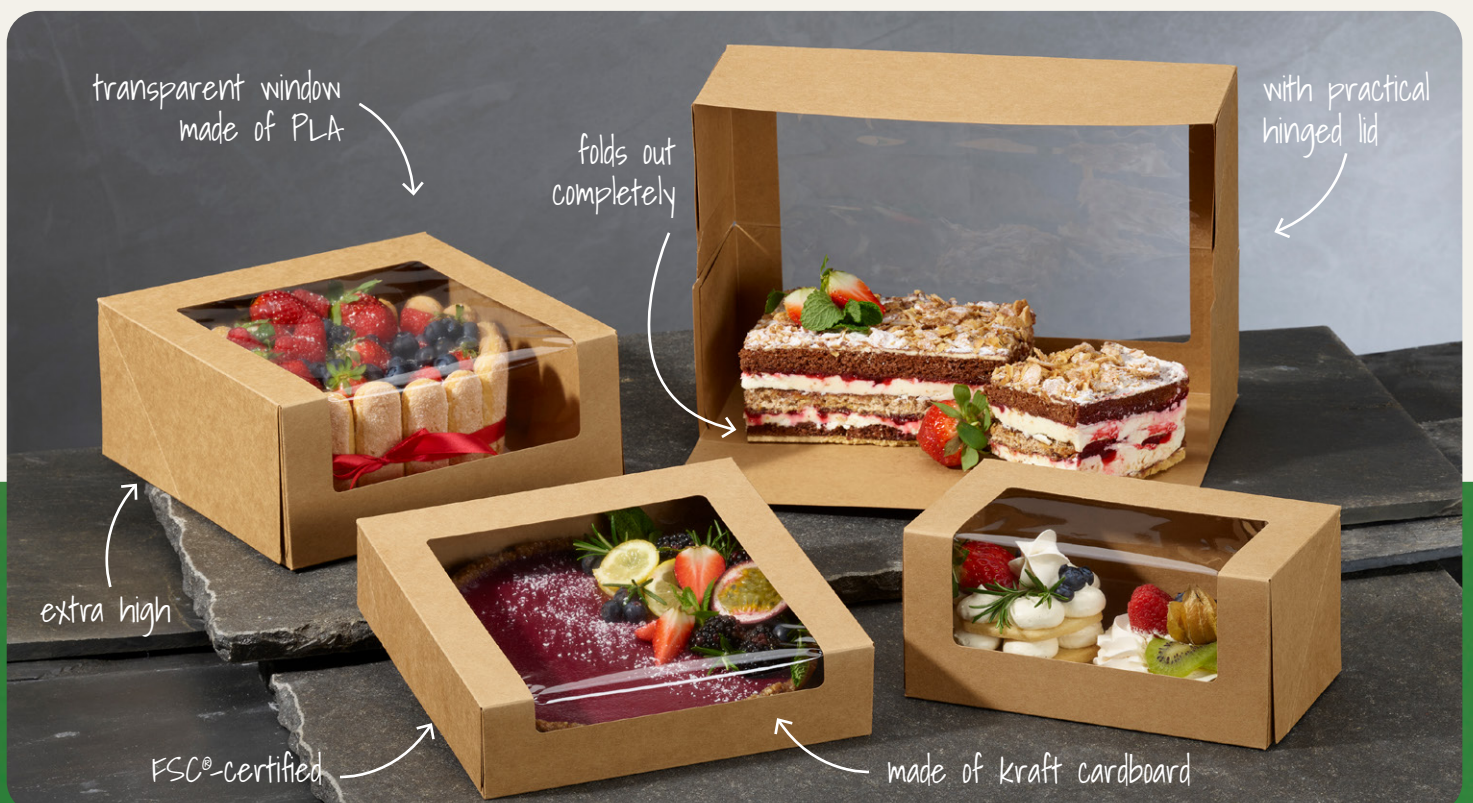

Tip from the bakery world taken up and thought through sustainably

PAPSTAR has now been able to fulfil the urgent wish of an entire industry. Confectioners and bakeries had increasingly expressed the need for attractive to-go packaging for cakes or cupcakes, which differ in one essential detail from the versions currently available on the market: They are 10 centimetres high (instead of the previously standard 8 centimetres) and therefore allow cakes, tarts and cupcakes to be transported undamaged and clean.

A decisive detail: buttercream toppings or icing no longer stick to the lid - for the sake of aesthetics and enjoyment. You eat with your eyes!

The boxes are all made of FSC®-certified kraft cardboard and also have a biodegradable viewing window made of corn starch (PLA - polylactide).

In addition, the boxes are designed so that pastries, cakes or cupcakes can be easily inserted and removed. One side of each box can be opened completely, making it easy to use a cake scoop or cake server.

Sturdy cake boards – perfect for our new cake boxes

Our new cake boards are double-sided: one side features a gold foil finish, the other silver.

The 3 mm thick cardboard provides exceptional stability and secure support – ideal for presenting and transporting your baked creations. The various sizes are perfectly matched to our new cake boxes. Additionally, the boards are FSC®-certified, making them a sustainable choice.

ABOUT US

The PAPSTAR product range is made up of over 5000 consumables from around 200 productions in the categories disposable tableware, service packaging, table settings and household & hygiene. Besides the systematic and consequent use of renewable raw materials, the company is also devoting itself more and more to sustainable solutions in terms of cyclical material flow management.

For example, food scraps and bio-wastes of plant origin or disposable tableware and napkins made from renewable raw materials can be transformed into a new secondary raw material in a fibre-recovery treatment process. This new secondary raw material can, for example, be recycled for the production of industrial cardboard.

Europe-wide logistics and service concepts ensure the permanent supply availability of the entire product range.
